SIGER

Integrated Waste Management System

- **How many resources are spent by your company to produce information SIRAPA?**
- **Without requiring a permanent link connected to headquarters Siger can ensure the operation of all affiliates 24/7!**
- **Do you pretend to ensure that your products are according to the LER agreement?**
- **Maintaining a decentralized operation and ensure the reliability and consistency of information is a concern?**

AURORA SIGER is a complete solution of waste management adapted to the area of the environment, applicable to transfer stations, recycling centres and collection centres.

The system architecture model allows the separation of the responsibilities of every profile of the business area, as well as the integration of new modules/features that the customer can order.

1.

BACK OFFICE |

The Back Office is a central system, normally installed at the headquarters, which allows the centralized manage of all information.
2.

FRONT OFFICE |

Works in mode of Store and Forward, i.e., the data is always stored locally, not depending on how permanent is the communication with central.

3.

REPORTING |

The communication is assured by an automatic integration system in the two ways, as user-defined time interval. The Reporting module permits do the analysis of all the information in a centralized way and updated.

Administration	Security	General data	Entities
MODULES			
Exploration	Synchronization	Integration	Documents
